According to our (Global Info Research) latest study, the global UAV Millimeter Wave Radar Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

UAV Millimeter Wave Radar Sensor is a type of millimeter wave radar sensor used for unmanned aerial vehicles. It detects objects around it by sending and receiving radio waves, and provides information about their distance, speed, direction, and size.

Millimeter wave radar sensors are active radar sensors that use high-frequency electromagnetic waves to detect targets. Compared to other radar sensors, millimeter wave radar sensors have a higher frequency, which allows for higher resolution and more accurate measurements. Additionally, millimeter wave radar sensors can penetrate some obstacles such as fog, rain, and dust, so they can provide reliable data even in harsh weather conditions.
