UFS (Universal Flash Storage) is a high-speed, high-performance flash storage interface designed primarily for mobile devices. It is capable of providing fast data transfer rates and low latency, making it suitable for applications that require quick data access, such as smartphones, tablets, and digital cameras. UFS offers significantly higher performance compared to its predecessor, eMMC (embedded MultiMediaCard), by implementing a serial interface and utilizing a more advanced command and queuing structure. This enables UFS to achieve faster read and write speeds, as well as reduced power consumption. UFS supports both single-lane and multi-lane configurations, with each lane capable of achieving speeds up to 5.8 Gbps (gigabits per second). It also supports multiple power modes to help optimize energy usage. In addition to its superior performance, UFS provides features like command-based error reporting, advanced wear leveling, and security features like data encryption to ensure the integrity and confidentiality of stored data.
