## Abstracts

The global UHD Flat-screen TV market size is expected to reach \$ 308545 million by 2032, rising at a market growth of 17.6% CAGR during the forecast period (2026-2032).

In 2025, global production of UHD Flat-screen TVs reached 115.82 million units, with an average selling price of \$817 per unit. UHD Flat-screen TVs refer to television display systems that conform to the UHD TV standard. The resolution has jumped from the traditional FHD (1920?1080) to UHD-1/4K UHD (3840?2160, approximately 8.3 million effective pixels), and in higher-end scenarios it extends to UHD-2/8K UHD (7680?4320). It features high resolution, high frame rate, high dynamic range, wide color gamut, and high quantization accuracy. Together with HDR, high color gamut, high-definition high-speed interface and intelligent system, it constitutes an 'experience-level upgrade'. Application areas include home audio-visual entertainment and games, as well as hotel and apartment facilities, conference and education displays, digital signage/information publishing in commercial venues, and broadcasting and OTT terminal support. The upstream of the industry chain includes glass substrates, polarizers/optical films, TFT backplanes and LCD/OLED panels, backlighting and MiniLED lamp boards/drivers, T-CON and driver ICs, main control SoCs and storage, Wi-Fi/Bluetooth/HDMI and other connection devices, structural components and heat dissipation, power supplies and speakers; the midstream is complete machine manufacturing (system integration, image quality algorithms, reliability and certification); the downstream is distributed through offline home appliance retail/KA, operators and engineering channels, e-commerce and cross-border platforms, installation and delivery to end users, covering a wide range of household consumers and commercial users in various industries. Gross profit margin is approximately 15-20%.
