## Abstracts

According to our (Global Info Research) latest study, the global UHF Diodes market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

UHF diodes are diodes that are developed for the application of UHF in the field of electronic communication and can adapt to the application of this band. It is mainly used in nonlinear conversion circuits such as switching, detection, modulation, demodulation and frequency mixing.

The need for continuous power supply, growing emphasis on dynamic mobility, and rising awareness of its importance among individuals in developed countries have had a major impact on market revenue growth in recent years. Traditionally designed to protect delicate electrical equipment from damage caused by high voltage transients, transient voltage suppressors are now widely used in the automotive, computing and telecommunications industries. Their reaction time is much faster than their traditional diode-based counterparts. Increased sensitivity to electrical stress due to ever-smaller component sizes increases the demands placed on TVSs in critical end-use applications. Operating diodes at such low voltages is expected to accelerate the growth of the TVS diodes market. The demand for transient voltage suppressors (TVS) is expected to increase in major end-uses owing to the growing trend of component miniaturization, which increases electrical sensitivity, and is expected to remain one of the key growth drivers for the TVS market over the course of the study. Fast reaction time of diodes (less than 1 nanosecond from 0 volts to BV), growing trend of component size reduction, technological breakthroughs, increasing demand for different end-use applications, and increasing sensitivity to electrical stress are the key market drivers for TVS diodes. Fast reaction times indicate that lead inductance and PCB traces are the

culprits for the voltage overshoot. The wide adoption of cutting-edge technologies and rising R&D activities are expected to create many new possibilities, which will drive the expansion of the market. Fast reaction time of diodes and rapid global growth of the semiconductor industry are also expected to favorably influence the expansion of the market. As TVS diodes can be used at various operating voltages, the demand for diodes will increase significantly. Many advantages such as low incremental surge resistance and easy access to high current protection from 6KA to 10KA are also expected to boost the market expansion.
