In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The series compensation system is device used in power systems, mainly used to improve the transmission capacity of transmission lines, improve the power factor of the power grid, reduce power losses and enhance the stability of the power grid. It adds capacitors or inductors to the transmission lines to change the reactance characteristics of the lines, thereby adjusting the flow of reactive power and achieving the purpose of optimizing the operation of the power system. In Ultra High Voltage (UHV) transmission lines (like 1000kV AC or  $\pm 800$ kV DC), Series Compensation Systems are capacitor banks installed in series with the transmission line conductors.
