According to our (Global Info Research) latest study, the global Ulopterol market size was valued at US\$ 123 million in 2025 and is forecast to a readjusted size of US\$ 194 million by 2032 with a CAGR of 6.6% during review period.

Michelia alba extract is a natural compound extracted from the traditional Chinese medicine Michelia alba, belonging to the phenylpropionic acid class of compounds. It possesses various biological activities, including anti-inflammatory, antitussive, expectorant, antioxidant, and hepatoprotective effects, thus holding significant pharmacological value in both traditional Chinese medicine research and modern medicine. Due to its unique chemical structure and diverse pharmacological properties, Michelia alba is widely studied for potential drug development to treat respiratory diseases, inflammatory diseases, and other related conditions.

The upstream of the Michelia alba industry chain mainly focuses on the standardized cultivation and raw material collection of Apiaceae plants such as Michelia alba, and is significantly affected by the authentic producing area, planting cycle, and content of active ingredients. The midstream involves extraction, separation, and purification, employing processes such as solvent extraction, column chromatography, and crystallization to obtain Michelia alba extracts of varying purities. Technological level and scale-up capabilities determine cost and stability. The downstream applications are primarily in pharmaceutical intermediates, natural drug development, functional raw materials, and research reagents. In terms of profitability, midstream extraction and refining companies typically have gross profit margins of 35%?55%, with higher margins for high-purity, pharmaceutical-grade products. Capacity utilization is generally between 60% and 80%, significantly affected by seasonal fluctuations in raw materials, order stability, and the pace of downstream R&D/pharmaceutical demand.

Global production of imperatorin from white flower reached 140,023 tons in 2025, with an average selling price of US\$857 per ton.

As a natural compound, pursedrin exhibits multiple pharmacological activities, especially in anti-inflammatory, antitussive, expectorant and antioxidant effects, which makes it have broad prospects in the development of new drugs and health products. However, the current research on pursedrin is mainly concentrated in the basic research stage, and its safety and effectiveness in clinical applications still need to be further verified. With the development of more clinical studies and trials, pursedrin is expected to become an important candidate drug for the treatment of respiratory diseases and inflammatory diseases, and play a greater role in the fields of health care and beauty.
