The global Ultra-efficient Glass Fiber Filtration Paper market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Glass fiber filtration paper, often referred to as glass fiber filter paper or glass microfiber filter paper, is a type of filter medium made from fine glass fibers. These fibers are randomly arranged to form a matrix with a high surface area and are commonly used in various filtration applications due to their advantageous properties. Ultra High-Efficiency Air Filter with Glass Fiber Paper (Ultra High-Efficiency Air Filter with Glass Fiber Paper) is a filter material used to provide excellent air filtration performance. This type of filter is typically designed for use in highly clean environments such as medical facilities, laboratories, electronics manufacturing, pharmaceuticals and other locations where air quality is critical. Typically captures over 99.97% of 0.3 micron particles
