Abstracts

According to our (Global Info Research) latest study, the global Ultra-filtration Cartridge market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The ultrafiltration membrane removes organic contaminants, viruses, bacteria, cysts, etc. down to a size of 0.01 micron without requiring toxic chemical treatments. Ultrafiltration works by physical particle exclusion. Raw water is filtered under pressure through a high-technology hollow fibre membrane. Our units are predominantly Inside-Out flow configuration, with the option of forward flushing the membrane. This reduces the incidence of membrane fouling and allows for high solids loading, high flow area and easy cleaning. Unlike Reverse Osmosis, Ultrafiltration does not remove the dissolved mineral salts, hence the filtered water is not acidic and provides improved health benefits.
