The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. Ultra Fine Grinder is a type of equipment used for grinding and processing various substances, which can crush hard, brittle or viscous materials into fine particles. Compared with ordinary grinding machines, the Ultra Fine Grinder can grind materials into finer powders, usually within the range of several hundred to several thousand meshes, and is therefore also known as an ultra-fine grinding device.

The Ultra Fine Grinder generally consists of a main engine, feeding system, discharge system, control system, and classification system, etc. Its main working principle is to use high-speed rotating blades or other pulverizing tools to crush and grind materials. At the same time, by controlling the appropriate airflow, the materials can be classified after being crushed, so as to achieve precise control and classification of the powders. The Ultra Fine Grinder is mainly used in industries such as chemical engineering, pharmaceuticals, food, mining, metallurgy, and building materials. It can handle a variety of materials, such as limestone, perlite, diatomaceous earth, calcium carbonate, iron oxide, ceramic powder, etc.
