According to our (Global Info Research) latest study, the global Tubular Membranes market size was valued at USD 6765.3 million in 2023 and is forecast to a readjusted size of USD 9937.3 million by 2030 with a CAGR of 5.6% during review period.

Tubular membranes are not self-supporting membranes. They are located on the inside of a tube, made of a special kind of material. This material is the supporting layer for the membrane. Because the location of tubular membranes is inside a tube, the flow in a tubular membrane is usually inside out. The main cause for this is that the attachment of the membrane to the supporting layer is very weak.

The Global Info Research report includes an overview of the development of the Tubular Membranes industry chain, the market status of Energy & Power (Membrane Bioreactor, Reverse Osmosis), Chemicals (Membrane Bioreactor, Reverse Osmosis), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Tubular Membranes.
