The global Ultra-Low Sulfur Diesel market size is expected to reach \$ 1088 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

The core function of ultra-low sulfur diesel is to significantly reduce sulfur oxides (SOx) and particulate matter (PM) emissions from diesel engines, thereby effectively mitigating air pollution, protecting human health, and promoting the application of modern exhaust aftertreatment systems to comply with increasingly stringent environmental regulations. The upstream supply chain mainly includes crude oil extraction, refineries producing ultra-low sulfur diesel through processes such as hydrodesulfurization, and additive suppliers; the downstream involves warehousing and logistics, gas station networks, and ultimately its use in transportation, agricultural machinery, and shipbuilding, forming an energy industry chain from crude oil extraction to end-consumer. In 2025, the production of ultra-low sulfur diesel is estimated at approximately 900,000 tons, with an average price of approximately US\$900 per ton, a gross profit margin of approximately 25%, and a single production line capacity of approximately 11,000 tons per year.

This report studies the global Ultra-Low Sulfur Diesel production, demand, key manufacturers, and key regions.
