Abstracts

The global Ultra-low Temperature Freezers market size is expected to reach \$ 1078 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

An ultra-low temperature freezer is a refrigerator that stores contents at -40 to -86 °C (-40 to -123 °F). An ultra-low temperature freezer is commonly referred to as a 'minus 80 freezer' or a 'negative 80 freezer', referring to the most common temperature standard. ULT freezers come in upright and chest freezer formats. Typical models include: PHC Corporation MDF-DC102VH MDF-DU502VH MDF-DU702VH MDF-DU502VX MDF-DU702VX MDF-DU901VHL -86?, MDF-1156 MDF-C2156VAN -150?, Haier DW-86L419 DW-86L579 DW-86L626 DW-86L729 DW-86L829 -86?, DW-150W209 -150?.

With the steady development of the global economy and the increasing trend of population aging, countries have increased their investment in medical and health care year by year, and people's spending on health has also increased day by day, among which the level of medical device spending, which accounts for a relatively high proportion, has also continued to increase. Biomedical cryogenic storage equipment is an important infrastructure in the field of biomedicine. The expansion of the scale of refrigerated drugs and equipment and the growth of standardized storage will promote the development of the ultra-low temperature freezer market.

Only with standardized, high-quality, and complete clinical data biological samples, and then through accurate large-sample verification, can accurate translational research results be produced, and ultimately clinical precision medicine practice be realized. To this end, research institutions led by governments and universities at home and abroad

have established a number of representative biobanks, including the Pan-European Biobank and Biomolecular Resource Research Facility, the British Biobank, and the American Tumor Tissue Biobank, etc., and domestically, including the China Bone Marrow Bank and the National Gene Bank. Taking the China Bone Marrow Bank as an example, it is currently the largest healthy human blood biobank in China with the widest geographical coverage, the richest ethnic diversity, and the largest scale. With the increase in the number of samples stored in biobanks led by governments and universities, there will be a continuous demand for cryogenic storage equipment. At the same time, in the future, the construction of biological sample libraries led by hospitals, pharmaceutical research and development service companies, third-party medical testing companies and third-party physical examination centers will have a large room for growth, and will also generate a large demand for low-temperature storage equipment.
