## Abstracts

The global Ultra-pure Water Purification Units market size is expected to reach \$ 812.8 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

Global key manufacturers of ultra-pure water purification units include Merck Millipore, Veolia, Thermo Scientific, Sartorius, etc., mainly located in North America, Europe, China, Japan, etc.. The top three manufacturers together account for about 60% of the market share, with the largest manufacturer being Merck Millipore, accounting for 30%. In terms of its product categories, it is divided into desktop and floor standing type, with the former holding a larger market share, accounting for 71%. In terms of applications, pharmaceuticals is the number one area of application, with a share of about 45%; in addition, electronics and semiconductors, and academic research are also important areas of application.

An ultra-pure water system eliminates bacteria with UV radiation. These laboratory water purification systems can achieve up to 18.2 MOhm-cm in resistivity (high resistivity indicating low levels of anionic contamination) and can reduce organic carbon to less than 50 ppb. An ultrapure water system is equipped with ultra-filters to remove endotoxins, DNase and Rnase left over from bacteria destroyed by UV, resulting in extremely low total organic carbon (TOC). Additional carbon filters in these laboratory water purification systems reduces the need for pre-treatment, permitting tap water as a source.

In this report, we only study laboratory ultra-pure water purification equipment, not include industrial system which are customized and very expensive, price range \$100000-\$1000000 per unit.

This report studies the global Ultra-pure Water Purification Units production, demand, key manufacturers, and key regions.
