Abstracts

According to our (Global Info Research) latest study, the global Ultra Short Baseline Positioning Systems (USBLs) market size was valued at US\$ 369 million in 2024 and is forecast to a readjusted size of USD 554 million by 2031 with a CAGR of 6.4% during review period.

A USBL system is a way to track the location of subsea objects in a wide range of water depths – anything from 5 to 5,000 metres or more. You might need to work anywhere from a harbour or coastline environment to a deep-sea location according to industry and field of study or expertise. Use cases for USBLs typically involve tracking the position of remotely operated vehicles (ROVs), autonomous underwater vehicles (AUVs), human divers, underwater structures and various kinds of equipment – fixed or unfixed. Sometimes, USBLs are also used to map the sea bed or as a method of position referencing for surface vehicles. USBLs are popularly used by companies working in offshore wind, geologists, surveyors, the military and conventional energy companies – wherever they need to track or position assets, explore the sea bed and carry out inspections, maintenance and repairs.
