Abstracts

According to our (Global Info Research) latest study, the global Ultra Thin Copper Foil with Carrier market size was valued at US\$ 141 million in 2025 and is forecast to a readjusted size of US\$ 231 million by 2032 with a CAGR of 6.0% during review period.

Ultra thin copper foil with carrier is a specialized electronic material composed of an extremely thin copper foil layer bonded to a temporary carrier foil or film. The carrier provides mechanical support during handling, lamination, and PCB manufacturing, preventing wrinkles, tearing, and deformation of the ultra-thin copper layer. It is mainly used in high-density interconnects, advanced packaging substrates, flexible circuits, IC substrates, and high-end multilayer PCBs where fine lines, high reliability, and miniaturized circuit designs are required. In 2025, global Ultra Thin Copper Foil with Carrier production reached approximately 8583 tons, with an average global market price of around US\$15943 per ton. The production capacity for Ultra Thin Copper Foil with Carrier in 2025 was approximately 10000 tons. The typical gross profit margin for Ultra Thin Copper Foil with Carrier is between 20% and 40%.

The ultra thin copper foil with carrier market is driven by the growing demand for advanced PCB and semiconductor packaging technologies, especially in smartphones, AI servers, high-performance computing, automotive electronics, 5G communication, and miniaturized electronic devices. As circuit designs continue to move toward finer line widths, higher layer counts, and thinner substrates, carrier-supported ultra-thin copper foil is increasingly adopted to improve processing stability and manufacturing yield. The market is expected to benefit from the expansion of IC substrates, HDI boards, flexible electronics, and advanced packaging applications, while suppliers compete on copper thickness uniformity, peel strength control, surface treatment

technology, reliability, and compatibility with next-generation PCB processes.
