Diamond saw blade is a cutting tool that is widely used in the processing of stone, ceramics and other hard, brittle or abrasive materials. Diamond blades are made up of two components: the steel core and the segment (diamond crystals and a bonding system). The core is typically a round flat metal disc used to support the outer segments. The diamond can be attached to the core using vacuum brazing, sintering, or laser welding. Ultra-thin diamond saw blade generally refers to a thickness of less than 1.0 mm.
