In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ultra-thin LiPo (lithium polymer) batteries are rechargeable lithium-ion batteries that use a polymer-based electrolyte, offering advantages such as minimal thickness, lightweight structure, and flexible shapes. These batteries are ideal for ultra-slim electronic applications including smart cards, wearable devices, and compact sensors. Their thickness can be less than 1 mm and they can be customized into various non-standard shapes. While ultra-thin LiPo batteries provide good safety and mechanical stability, they generally have lower energy density compared to traditional cylindrical or prismatic cells, requiring careful consideration of trade-offs between size, capacity, and lifespan based on the specific application.
