Abstracts

According to our (Global Info Research) latest study, the global Ultra-thin and Ultra-wide Lithium Strips market size was valued at US\$ 124 million in 2024 and is forecast to a readjusted size of USD 208 million by 2031 with a CAGR of 7.0% during review period.

Ultra-thin and ultra-wide lithium strips are advanced lithium metal materials characterized by their extremely thin thickness (typically less than 50 microns) and wide format (often exceeding several hundred millimeters). These strips are used primarily as anode materials in next-generation high-energy-density batteries, particularly solid-state lithium batteries. Their unique properties—lightweight, high conductivity, and excellent formability—make them ideal for applications in electric vehicles, aerospace, consumer electronics, and high-end energy storage systems. By enabling more compact and efficient battery designs, ultra-thin and ultra-wide lithium strips play a crucial role in advancing lithium metal battery technology.
