According to our (Global Info Research) latest study, the global Ultra Thin Silicon Steel Sheet market size was valued at US\$ 823 million in 2025 and is forecast to a readjusted size of US\$ 1077 million by 2032 with a CAGR of 3.9% during review period.

Ultra Thin Silicon Steel Sheet refers to a highly specialized electrical steel product with an extremely small thickness, typically below 0.50 mm and in advanced applications even below 0.10 mm. It is primarily produced through precision cold rolling and controlled annealing processes to optimize magnetic properties, dimensional accuracy, and surface insulation performance. This material contains silicon (generally 1.0–3.5%) to improve electrical resistivity and reduce core losses, making it particularly suitable for high-frequency and high-efficiency electromagnetic applications. Ultra thin silicon steel sheets are widely used in high-speed motors, micro-motors, precision transformers, EV drive systems, aerospace generators, and compact energy conversion devices. Key advantages include low iron loss, high magnetic permeability, excellent lamination factor, reduced eddy current loss, and superior mechanical strength despite minimal thickness.

In 2025, global Ultra Thin Silicon Steel Sheet production reached approximately 400 K MT, average price was 2000usd/unit
