Abstracts

The global Ultra-trace Biological Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An Ultra-trace Biological Detector, also known as a UTBD, is a device used to detect and identify biological agents at extremely low concentrations. These devices are commonly used in biosecurity and biodefense applications to monitor for the presence of dangerous pathogens, such as viruses, bacteria, or toxins, in environments such as hospitals, research facilities, or airports. UTBDs typically use highly sensitive and specific technologies, such as polymerase chain reaction (PCR) amplification or immunoassay methods, to detect and identify biological agents. Some UTBDs can provide real-time results, allowing for rapid response and intervention in the event of an outbreak or attack. Overall, UTBDs play an important role in ensuring public safety and preventing the spread of infectious diseases.
