According to our (Global Info Research) latest study, the global Ultra-Wideband Chip market size was valued at US\$ 1962 million in 2025 and is forecast to a readjusted size of US\$ 5082 million by 2032 with a CAGR of 14.7% during review period.

An Ultra-Wideband (UWB) Chip is a semiconductor device that enables devices to communicate using Ultra-Wideband (UWB) technology. UWB is a radio technology that uses a broad range of frequencies, typically from 3.1 GHz to 10.6 GHz, to transmit data over short distances. The chip integrates all the necessary components to transmit and receive UWB signals, enabling applications like precise location tracking, short-range communication, and data transfer.

UWB chips are widely used in various applications requiring high accuracy, fast data transmission, and low power consumption. The key functions of UWB chips include the transmission and reception of radio signals, distance measurement, and positioning.
