According to our (Global Info Research) latest study, the global Ultracentrifuges market size was valued at USD 1297.8 million in 2023 and is forecast to a readjusted size of USD 1623.9 million by 2030 with a CAGR of 3.3% during review period.

A centrifuge is a device that separates a liquid phase heterogeneous system by centrifugal force. Depending on the sedimentation coefficient, mass, density, etc. of the substance, the method of applying strong centrifugal force to separate, concentrate and purify the substance is called centrifugation. Generally speaking, the centrifuge with a speed of more than 10000r/min is called ultracentrifugation. Ultracentrifuges are laboratory centrifuges and are widely used in scientific research, education and production departments such as biology, chemistry, and medicine. It uses the strong centrifugal force generated by the high-speed rotation of the rotor to separate liquid and solid particles or components in liquid mixtures, and is suitable for rapid separation and synthesis of trace samples.

Global key players of Ultracentrifuge include Beckman Coulter, Thermo Fisher Scientific, Eppendorf AG, Hettich Instruments etc. The top three manufacturers held approximately 62% of the market. North America is the largest market, has a share about 40%, f?
