Abstracts

The global Ultrafine Glass Fiber (AGM) Separators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ultrafine glass fiber (AGM) separator is made of glass fiber with a diameter of 0.6-3um and is made by wet process technology. The product has good acid resistance, high porosity, small pore size, high liquid absorption rate, and low resistance. It has the functions of preventing short circuit and absorbing the required electrolyte. Its free channel allows oxygen to recombine into water on the negative electrode. There is no need to replenish water during use, and functions such as maintenance-free are realized.
