An ultrafine grains powder mill is a device that breaks solid materials into powder through grinding. This grinding process is a crucial unit operation in many industries, commonly applied in metallurgy, building materials, chemicals, and mining. Among them, the roller mill is one of the most common types. During the operation of a roller mill, all grinding rollers rotate within a ring. The material is driven to the edge of the rotating disk by centrifugal force and falls into the grinding chamber, where it undergoes repeated compression, crushing, and grinding by the grinding rollers. Besides roller mills, ultrafine grinding equipment also includes jet mills and other specially designed devices.
