Ultrafine solder pastes are used in semiconductor packaging to create electrical connections between semiconductor chips and their substrates or boards. These pastes consist of tiny solder particles mixed with flux, which helps in the soldering process. In semiconductor packaging, the demands for precision and miniaturization are very high. Ultrafine solder pastes are designed with extremely small solder particles, often in the range of micrometers or less. This allows them to be used in applications where the solder joints need to be very small and densely packed, such as in advanced semiconductor packages and high-density circuit boards.
