Abstracts

The global Ultrafine Talc Powder market size is expected to reach \$ 678 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Ultrafine talc powder can be processed from high-purity talc ore. It has excellent physical properties such as lubricity, fire resistance, acid resistance, insulation, high melting point, chemical inactivity, good hiding power, softness, good gloss, and strong adsorption. 1. Chemical properties. Since the crystal structure of talc is layered, it tends to split into scales and has special lubricity. If the content of Fe_2O_3 is high, its insulation will be reduced. Widely used in plastics, rubber, paint and other industries.

Development Trends

1. Plastics and Rubber: Still the Core, Upgrading is the Main Theme: The plastics and rubber sector remains the largest application market for ultrafine talc, accounting for approximately 52% of global consumption. In this sector, the market is shifting from traditional applications to lightweight automotive materials. Especially in the new energy vehicle sector, talc-reinforced polypropylene composites are widely used in components such as battery pack casings, helping to achieve vehicle lightweighting. For example, materials using specific talc blends can achieve V-0 flame retardancy, reducing weight by up to 40% compared to traditional metal parts.

2. New Energy Vehicles: Opening Up New Growth Points: As a continuation of the automotive lightweighting trend, new energy vehicles are becoming a significant driving force for the growth in demand for ultrafine talc. For example, leading power battery companies have listed 'ultrafine talc coating' as a key step in their technology roadmap for cost reduction and efficiency improvement, indicating that its application value in the

battery materials field is being gradually explored.

3. Coatings and Paints: The Second Largest Market, Stable Demand: As the second largest application area, it accounts for approximately 21% of sales. With the continued development of the global construction and industrial sectors, the demand for high-quality fillers in the coatings market remains stable.

4. Cosmetics, Pharmaceuticals, and Food: Towards 'High-End, Safe, and High-Purity': The pursuit of ultimate safety and purity is driving this market towards 'high purity and impurity-free' products. In the cosmetics and pharmaceutical fields, high-purity products are highly sought after; in the food industry, the application of high-purity ultrafine talc is also becoming increasingly widespread. In the high-end pharmaceutical field, the application of talc has expanded to cutting-edge areas such as the preparation of absorbable fracture fixation devices and long-acting drug delivery microspheres.
