Ultramarine Blue for Plastic is a type of inorganic pigment widely used in the plastics industry due to its excellent color stability, heat resistance, and non-toxicity. It is a sodium aluminosilicate with sulfur and is known for its deep blue color.

Ultramarine Blue is a natural inorganic pigment that comes entirely from mineral resources. Under strict environmental regulations, environmentally friendly pigments that are non-toxic and can replace traditional lead-cadmium pigments are becoming popular.

Ultramarine Blue inherits excellent high temperature resistance, light resistance and weather resistance, and is widely used in plastic products (such as PE, PP, PVC, ABS, etc.).

Ultramarine has very reliable safety performance both in the production process and the final application process, and it still has high safety after a long period of market circulation. Although there are many blue pigments to choose, ultramarine blue is still favored by various industries for its unique pigment properties.
