Abstracts

The global Ultrapure Hydrogen Peroxide market size is expected to reach \$ 1843 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Ultrapure hydrogen peroxide refers to high-purity hydrogen peroxide that has undergone high-level purification, filtration, metal ion control, particle control, and packaging cleaning treatment. It is mainly used for wet cleaning, oxidation cleaning, etching cleaning, photolithography cleaning, CMP cleaning, and pollutant removal in semiconductor, display panel, photovoltaic cell, advanced packaging, and electronic component manufacturing. Compared with ordinary industrial grade hydrogen peroxide, ultra pure hydrogen peroxide has stricter control over sodium, potassium, iron, copper, nickel, aluminum, calcium, magnesium, chloride ions, sulfate ions, particulate matter, total organic carbon, and stabilizer residues. It is usually divided into electronic grade, semiconductor grade, and advanced process ultra high purity grade, and is a key material in wafer cleaning and high-end electronic wet chemicals. In 2025, global Ultrapure Hydrogen Peroxide production reached approximately 865 K MT, with an average global market price of around US\$ 1,023 per MT.

Ultrapure hydrogen peroxide belongs to the core category of semiconductor wet electronic chemicals, and the market demand mainly comes from wafer fabs, memory plants, advanced logic chips, power semiconductors, display panels, photovoltaic cells, and advanced packaging. Among them, semiconductor grade and advanced process ultra-high purity grade are the most valuable application directions. With the reduction of line width in advanced processes, the increase of 3D NAND layers, the increase of wafer cleaning steps, the improvement of CMP post cleaning requirements, as well as the expansion of AI chips, automotive grade chips, and advanced packaging production,

the consumption and purity requirements of single wafers of ultra pure hydrogen peroxide continue to increase. Future market growth will not only come from sales expansion, but also from product level upgrades. Advanced process customers have a growing demand for metal ions, particles, anions, and more TOC? The higher requirements for packaging cleanliness and supply stability will drive the price and certification barriers of high-end products to remain at a high level.
