Abstracts

The global Ultrapure Water pH Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ultrapure Water pH Sensor is a device used to measure the acidity and alkalinity level of pure water (that is, water without any dissolved substances). The sensor usually uses glass electrodes or other chemical sensing materials as sensitive elements, and determines the acidity and alkalinity of the solution by measuring the concentration of hydrogen ions in the aqueous solution. Pure water pH sensors usually have high precision and stability, and can accurately measure pH in a pure water environment for real-time monitoring of water quality and changes in acidity and alkalinity.
