Abstracts

The global Ultrasonic Board Testing Equipment market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The ultrasonic board testing equipment follows the board-type hardware design concept, cancels the delivery method of traditional instrument buttons and screen panels, and reduces the number of display panels, buttons, structural parts and other electronic components, etc., and transmits them through network interfaces and communication buses. Control the detection instructions, transfer the detection data to the PC at high speed, and implement data processing and algorithm implementation on the PC, which can achieve more powerful imaging functions; in addition, the PC can receive data for secondary development and processing, which is more suitable for scientific research and automation Detection Systems.

The board provides a complete SDK development kit, which can carry out secondary development according to the application characteristics of different industries, and is suitable for automatic production lines in metallurgy, steel, railway, machinery and other industries; it can also create customized solutions according to user needs, from Full chain service from design to installation and commissioning.
