The global Ultrasonic Copper Tube Sealing Machine market size is expected to reach \$ 40.38 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

An ultrasonic copper tube sealing machine is a dedicated ultrasonic metal solid-state welding system used in refrigeration-circuit manufacturing. After evacuation and refrigerant charging of refrigerators, air conditioners, or heat pumps, it crimps/flattens the process/charge copper tube (often also compatible with aluminum tubes) and applies high-frequency ultrasonic vibration under clamping force to create a hermetic (gas- and liquid-tight) seal without open flame. Many models integrate seal-and-cut in a single cycle. In 2025, global ultrasonic copper tube sealing machine production reached approximately 2,000 units, with an average global market price is between \$5k and \$35k per unit.

This report studies the global Ultrasonic Copper Tube Sealing Machine production, demand, key manufacturers, and key regions.
