Ultrasonic dust collector is a device that uses ultrasonic technology to remove dirt from the surface of objects. It usually uses an ultrasonic generator to generate high-frequency ultrasonic signals, and converts the ultrasonic waves into physical vibrations through a converter, and then conducts them to the surface of the object. This ultrasonic vibration is powerful enough to shake and peel off dirt on the surface of the object, making it fall off. Ultrasonic dust collectors are widely used to clean and remove dust from the surfaces of various objects, such as glassware, metal parts, mechanical equipment, etc. It has the advantages of high efficiency, non-destructive and energy saving, and plays an important role in industrial production and daily cleaning.
