According to our (Global Info Research) latest study, the global Ultrasonic & Electric Current Beauty Device market size was valued at US\$ 306 million in 2025 and is forecast to a readjusted size of US\$ 512 million by 2032 with a CAGR of 6.9% during review period.

In 2025, global ultrasonic & microcurrent beauty device production reached approximately 15,700,000 units. The ultrasonic microcurrent beauty device is a beauty care equipment that combines ultrasonic infusion technology with microcurrent treatment functions, mainly used for skin cleansing, nutrient infusion, skin tightening, lifting, and anti-aging care. The device typically uses high-frequency ultrasonic vibrations to promote skin surface metabolism and enhance the penetration of skincare ingredients, while microcurrent stimulation helps activate the skin and facial muscles, promoting collagen production, improving skin elasticity, and enhancing facial contours to reduce skin laxity, fine lines, and dullness. Some products also integrate auxiliary functions such as EMS, ion infusion, hot and cold compress therapy, or LED light therapy to improve overall skincare performance. Featuring non-invasive treatment, convenient operation, and suitability for both home and professional care applications, ultrasonic microcurrent beauty devices are widely used in home beauty care, skin management centers, beauty salons, and light medical aesthetic support treatments. As consumer demand for intelligent skincare, portable beauty devices, and personalized care solutions continues to increase, modern ultrasonic microcurrent beauty devices are evolving toward intelligent operation, multi-mode adjustment, app connectivity, and multifunctional integration to enhance treatment safety, comfort, and user experience.

The ultrasonic microcurrent beauty device market has experienced steady growth in

recent years, driven by the increasing popularity of home beauty devices, growing demand for non-invasive skincare solutions, and rising consumer attention to skin tightening, anti-aging, and nutrient infusion treatments. As a beauty device integrating ultrasonic vibration, microcurrent stimulation, serum infusion, and facial lifting functions, it is widely used in home skincare, beauty salons, skin management centers, and auxiliary light medical aesthetic care applications. With consumers placing greater emphasis on safety, convenience, comfort, and comprehensive skincare performance, demand continues to increase for features such as multi-level intensity adjustment, EMS microcurrent technology, ion infusion, hot and cold compress therapy, LED light therapy, intelligent timing functions, and portable designs. Meanwhile, social media promotion, growing demand for early anti-aging care among younger consumers, and personalized skincare trends are driving ultrasonic microcurrent beauty devices toward greater intelligence, multifunctionality, lightweight structures, and more fashionable appearances. In the future, the market is expected to maintain growth potential, while competition will increasingly focus on infusion effectiveness, microcurrent output stability, skin compatibility safety, user experience, product durability, and after-sales service capabilities.
