According to our (Global Info Research) latest study, the global Ultrasonic Flosser market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The ultrasonic flosser uses the cavitation effect of ultrasonic waves in water to impact and separate the dirt on the tooth surface, and finally make the dirt layer fall off, which is the real ultrasonic cleaning. Without excessive flushing pressure, the cleaning effect is good, easy to operate and will not damage the gum tissue. The design of the ultrasonic system is simple and reliable, and the attenuation of ultrasonic waves is also minimal. The water outlet parts can be replaced, which can keep clean and hygienic.
