Abstracts

The global Ultrasonic Liposuction Knife market size is expected to reach \$ 242 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

In 2025, global ultrasonic lipolysis knife production reached approximately 98,000 units. Ultrasonic Lipolysis Device is a non-invasive aesthetic device that uses high-frequency ultrasonic energy for fat reduction and body contouring. It primarily utilizes focused ultrasound or ultrasonic cavitation technology to act on the subcutaneous fat layer, causing fat cells to vibrate, rupture, and gradually be metabolized and eliminated from the body, thereby achieving localized fat reduction, skin tightening, and body sculpting effects. Compared with traditional surgical liposuction, ultrasonic lipolysis devices offer advantages such as no surgical incision, shorter recovery time, less tissue trauma, and relatively safer operation. The device typically features multiple energy adjustment levels, intelligent temperature control, treatment heads with different penetration depths, and safety monitoring functions, enabling precise treatments according to different body areas and fat thicknesses. Ultrasonic lipolysis devices are widely used in medical aesthetic institutions, beauty salons, body management centers, and high-end home care applications. They are suitable for localized contouring and fat treatments on areas such as the abdomen, arms, thighs, waist, and double chin. With the growing consumer demand for non-invasive body shaping, comfortable treatments, and personalized body management solutions, ultrasonic lipolysis devices are gradually evolving toward intelligent operation, multifunctional integration, and higher safety standards.

The ultrasonic lipolysis device market has gradually developed in recent years, driven by the growing demand for non-invasive body contouring, the upgrading of body

management consumption, and increasing consumer attention to localized fat reduction and skin tightening treatments. As an ultrasonic body sculpting aesthetic device, it is widely used in medical aesthetic institutions, beauty salons, body management centers, and high-end home care applications. The device is suitable for fat treatment and contour shaping on areas such as the abdomen, waist, thighs, arms, back, and double chin. As consumers continue to place higher demands on safety, comfort, treatment effectiveness, and recovery time, market demand for devices featuring focused ultrasound, ultrasonic cavitation, multi-level energy adjustment, intelligent temperature control, and multifunctional combined treatment systems continues to increase. At the same time, aesthetic institutions are promoting the development of ultrasonic lipolysis devices toward intelligent operation, portability, higher efficiency, and high-end positioning in order to enrich body contouring programs, improve customer retention, and enhance service differentiation. In the future, the market is expected to maintain growth potential, while industry competition will increasingly focus on fat reduction effectiveness, energy stability, operational safety, equipment reliability, and brand after-sales service capabilities.
