According to our (Global Info Research) latest study, the global Ultrasonic Osteotome System market size was valued at US\$ 662 million in 2025 and is forecast to a readjusted size of US\$ 926 million by 2032 with a CAGR of 5.0% during review period.

Ultrasonic osteotome system, also known as ultrasonic bone knife, uses electrostrictive technology to achieve the conversion of electrical energy and mechanical energy. It destroys bone tissue through the acceleration generated by mechanical vibrations hundreds of thousands of times per second, and uses the small amplitude of the blade tip to protect soft tissue. Ultrasonic bone knife can be widely used in precise and high-risk orthopedic surgery.

As a high-precision device in modern surgery, ultrasonic osteotome system is mainly used in neurosurgery, spinal surgery, otolaryngology and maxillofacial surgery. The market drivers include: First, with the aging of the population, the number of patients with orthopedic diseases and degenerative lesions continues to rise, driving the demand for minimally invasive and safe surgical equipment. Second, the continuous advancement of medical technology has enabled ultrasonic osteotome to have higher cutting accuracy and soft tissue protection advantages, which has improved clinical acceptance. In addition, the increase in government investment in medical infrastructure worldwide has also provided a good development environment for the market. However, the market still faces some challenges. On the one hand, the high price of ultrasonic osteotome system poses a certain burden on small and medium-sized medical institutions; on the other hand, the use of equipment requires high professional skills of doctors, and the training cost and learning curve may affect the speed of promotion. At the same time, the uneven medical resources in some regions have also limited the

popularization of this technology. Overall, although the market prospects for ultrasonic osteotome system are broad, technical maturity, cost control and clinical promotion are still key issues for its continued development.
