According to our (Global Info Research) latest study, the global Ultrasonic Remote Water Meter market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Ultrasonic remote water meter, also known as ultrasonic remote water meter, is a smart water meter that uses ultrasonic technology to measure water flow and transmits data remotely through wireless communication technology. It combines the advantages of high-precision measurement and real-time data communication, greatly improving the level of intelligent water resource management. Ultrasonic remote water meter detects the time difference caused by the change in the speed of ultrasonic waves when they propagate downstream and upstream in water, and then calculates the water flow speed and flow, and transmits the measured data to the electronic metering device or data acquisition system to achieve remote meter reading and data management.
