Abstracts

The global Ultrasonic Therapeutic Apparatus market size is expected to reach \$ 423 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global ultrasonic therapeutic apparatus production reached approximately 60 k units, the average price is usd/unit. Ultrasonic therapeutic apparatus is a physical therapy device that uses low-frequency continuous or pulsed ultrasound waves, coupled to the surface of human soft tissues through a treatment head (ultrasonic transducer). This causes the sound waves to generate micro-vibrations, thermal effects, and cavitation/mechanical effects within the tissues, thereby promoting local blood circulation, accelerating the clearance of metabolic products, relieving chronic soft tissue adhesions, reducing pain, and assisting in the absorption of inflammation.

The gross profit margin of ultrasonic therapeutic apparatus is around 28%.

This report studies the global Ultrasonic Therapeutic Apparatus production, demand, key manufacturers, and key regions.
