Ultrasonic film spraying equipment is a kind of equipment that uses ultrasonic technology to spray liquid. It uses the sound wave pressure generated by high-frequency ultrasonic vibration to atomize the paint or liquid material into tiny droplets and spray them evenly onto the target surface. Its core principle is to convert electrical energy into mechanical vibration through ultrasonic transducers. The high-frequency vibration energy generated makes the liquid quickly form a fine spray. It has the characteristics of high precision, high uniformity and low material waste. It is widely used in electronic components, optical coatings, medical devices, automotive surface treatment and other fields.
