Ultrasonic tinning machine is a device that uses ultrasonic technology to process tin coating, and is usually used for tinning process on metal surfaces. The device promotes the uniform deposition of microscopic particles of tin liquid on the surface of the workpiece through the high-frequency energy of ultrasonic vibration, thereby forming a uniform and compact tin coating. Compared with traditional tinning methods, ultrasonic tinning machine can provide more precise coating control and higher coating quality, and is widely used in the surface treatment of electronic components, connectors, circuit boards and other precision parts.
