According to our (Global Info Research) latest study, the global Ultrasonic Tissue Ablation System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Ultrasonic ablation is a noninvasive treatment for the removal of diseased tissue by the employment of sound waves to reduce chronic low-back and neck pain caused due to degeneration of joints.

The mechanism is similar to using a magnifying glass to focus sunlight. Focused ultrasound uses an acoustic lens to concentrate multiple intersecting beams of ultrasound on a target. Each individual beam passes through tissue with little effect but at the focal point where the beams converge, the energy can have useful thermal or mechanical effects. HIFU is typically performed with real-time imaging via ultrasound or MRI to enable treatment targeting and monitoring (including thermal tracking with MRI).

In the Chinese market, the main manufacturers are Chongqing Haifu, Haiying, Puluo Medical, Insightec Ltd and Shanghai A&S, etc.
