The therapeutic principle of the ultrasonic uterine rejuvenation instrument is to stimulate the uterine smooth muscle through low-intensity ultrasound to produce a significant contraction reaction. Combined with the correct operating technique, it can cause the rhythmic contraction of the uterine smooth muscle, relieve postpartum pain, and promote the discharge of lochia, so as to help the parturient return to normal physiological state. Appropriate ultrasonic incident sound intensity and irradiation time can ensure the effectiveness and safety of the instrument. The ultrasonic uterine rejuvenation instrument has a fixed ultrasonic frequency. The operator only needs to control the treatment time and ultrasonic energy and operate according to the trained operating techniques to obtain good therapeutic effects.
