Abstracts

Ultrasound endoscopic biopsy guide needles are used as part of minimally invasive surgery to help medical staff perform fine-needle aspiration biopsy under the guidance of endoscopic ultrasound. An endoscope with an ultrasound probe and biopsy needle is inserted through the mouth into the esophagus. The probe bounces sound waves off body tissue, creating echoes that create a sonogram of the lymph nodes near the esophagus. Endoscopic ultrasound-guided needles can help obtain more accurate images of the gastrointestinal tract and provide minimally invasive access to hard-to-reach areas.
