According to our (Global Info Research) latest study, the global Ultrasound Imaging Analysis Service market size was valued at US\$ 1152 million in 2025 and is forecast to a readjusted size of US\$ 2030 million by 2032 with a CAGR of 8.4% during review period.

Ultrasound imaging analysis services refer to services that automate or semi-automatically process and analyze ultrasound examination processes and results using technologies such as traditional image processing, machine learning, deep learning, computer vision, automated measurement, image segmentation, lesion identification, view recognition, quality control, structured reporting, and clinical decision support, targeting medical ultrasound images, ultrasound video streams, and ultrasound DICOM data.

From a demand structure perspective, cardiac ultrasound remains one of the most commercialized sub-segments due to its high volume of examinations, numerous measurement parameters, high reporting standardization requirements, and long physician training cycles. Obstetric ultrasound, breast ultrasound, thyroid ultrasound, and POCUS are the fastest-growing areas, driven by expansion in primary healthcare, emergency and critical care, mobile healthcare, and specialist screening. The regulatory pathways for AI medical devices and ultrasound AI-assisted diagnostic software by the US FDA and China's NMPA/CMDE are becoming increasingly clear, reducing uncertainty for hospital procurement and manufacturer commercialization. However, this also raises requirements for clinical validation, algorithm security, data quality, and post-market regulatory oversight.
