The global Ultraviolet Circulating Wind Air Sterilizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ultraviolet circulating air air disinfection machine is a kind of ultraviolet air disinfection machine. This type of disinfection machine is a new type of disinfection machine specially designed for those who can sterilize and disinfect the air in an environment with people. Therefore, the biggest advantage and feature of the circulating air ultraviolet disinfection machine is that it can be used in an environment with people. It is sterilized and disinfected in a fixed place, and it will not produce any other peculiar smells or radiation during disinfection. When this type of disinfection machine is used in hospital wards and other places, it will not harm other equipment in wards and places. The ultraviolet rays covered in it are completely sealed inside the machine body, which is very safe.
