The ultraviolet spectroscopic oil meter is an instrument used to analyze and measure the oil content in liquid samples. Based on the principle of the ultraviolet spectroscopy, the oil content is determined by measuring the absorption or transmission of ultraviolet light by the sample.

The ultraviolet spectroscopic oil meter includes a UV light source, sample chamber, photodetector, data display and analysis, calibration and control, data storage and connection. It provides a fast and reliable method to determine the oil content in liquid samples and is widely used in Chemical industry, environmental monitoring and other fields.
