According to our (Global Info Research) latest study, the global Ultraviolet Stabilizers market size was valued at USD 1419.6 million in 2023 and is forecast to a readjusted size of USD 1945.2 million by 2030 with a CAGR of 4.6% during review period.

UV stabilizers are equipment manufactured to avoid degradation caused by exposure to ultraviolet radiation. They act as a shield for short and long exposures to UV radiations of the sun. UV stabilizers market are gaining traction owing to its action as a coating to plastics which includes cosmetics and films to protect the substance from long-term UV degradation effects of ultraviolet radiation.

The rise in awareness about the harmful effects of UV light on plastics is one of the primary growth factors for this market. Since plastic products exposed to sunlight suffer surface chalking and changes in the physical property of polymer materials, there will be an increasing demand for UV stabilizers for polymers to prolong the life of these polymer materials.
