Packaging printing technology is used to enclose and protect products before they are distributed, stored, sold, or used. Though the primary purpose of packaging is to store products, packaging printing technology also serves as a means of product and brand promotion and aids in the development of strong consumer relationships. The UV printing is a unique method of digital printing that uses ultraviolet (UV) light to dry or cure ink, adhesives, or coatings almost as soon as they contact the paper, aluminium, foam board, or acrylic.
