Unattended Payment Solution is a 24/7 self-service payment solution for commercial scenarios, based on technologies such as the Internet of Things (IoT), artificial intelligence (AI), and mobile payment. This solution automatically identifies goods or services through smart terminals and uses biometrics, barcode scanning, or RFID to complete user authentication and payment authorization, achieving unmanned transaction processes. Its core lies in integrating product management, payment processing, and security monitoring systems to ensure transaction accuracy and fund security, while simultaneously optimizing inventory and operational efficiency through real-time data synchronization. Typical applications include unmanned convenience stores, self-service gas stations, smart vending machines, and automated parking lots. This model significantly reduces labor costs, enhances consumer convenience, and provides merchants with precise decision-making support driven by data, making it a key component of new retail and digital service transformation.

Cost and Gross Margin Analysis: Unattended Payment Solution reduces direct labor costs by approximately 20%-30% by cutting cashier staff and optimizing scheduling, achieving incremental revenue through 24-hour operation. Its core costs include smart hardware procurement, IoT/SaaS platform maintenance, and technology R&D amortization. Gross margin primarily depends on the balance between transaction volume commission and fixed cost amortization, typically reaching 40%-60% at scale. The profitability of this model highly depends on branch foot traffic and customer loyalty;

its essence lies in the substitution of labor costs and efficiency improvements through technological investment.
