According to our (Global Info Research) latest study, the global Under-screen Fingerprint Recognition Solution market size was valued at US$ 2071 million in 2023 and is forecast to a readjusted size of USD 2891 million by 2030 with a CAGR of 4.6% during review period.

Under-screen fingerprint recognition solution is an advanced biometric technology that enables a seamless, beautiful and secure unlocking and payment experience by integrating the fingerprint sensor underneath the smartphone screen. There are two main technology paths: optical and ultrasonic. Optical under-screen fingerprint recognition utilizes the self-luminous nature of the OLED screen, and when the user's finger presses the screen, the screen emits light to illuminate the fingerprint, and the reflected light is captured and processed into a fingerprint image through the screen substrate by the optical sensor below. This approach is somewhat dependent on ambient light, but has a high resolution and recognition speed.
